AP CALCULUS AB
Supplement 1.8
Approximating Derivatives

Name $\qquad$
Date
Period $\square$
$\qquad$

1. Use the table to approximate the expressions in $\mathrm{a}-\mathrm{d}$, and answer question e .

| $\boldsymbol{x}$ | -2 | -1 | 0 | 2 | 3 | 5 | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\boldsymbol{f}(\boldsymbol{x})$ | -4 | 6 | 8 | 10 | 11 | 15 | 19 |
| $\boldsymbol{g}(\boldsymbol{x})$ | 3 | 0 | -1 | 2 | 7 | 8 | 9 |
| $\boldsymbol{h}(\boldsymbol{x})$ | 18 | 22 | 28 | 39 | 50 | 44 | 36 |

a. $f^{\prime}(2)$
b. $f^{\prime}(-2)$
c. $3 h^{\prime}(0)-2 g^{\prime}(7)$
d. $h^{\prime}(4)-f^{\prime}(4)$
e. Explain why $f^{\prime}(2)$, approximated in (a) above, may be undefined although a numeric value was obtained by estimation.
2. Use the graph to find an exact or approximate value, whichever is appropriate, for each expression.
a. $r^{\prime}(1)$
b. $r^{\prime}(2)$
c. $r^{\prime}(3)$
d. $r^{\prime}(4)$
e. $r^{\prime}(5)$
f. $r^{\prime}(6)$
g. $r^{\prime}(8)$

## Supplement 1.8 Solutions

1a. $f^{\prime}(2) \approx 1$
1b. $f^{\prime}(-2) \approx 10$
1c. $3 h^{\prime}(0)-2 g^{\prime}(7) \approx 16$
1d. $h^{\prime}(4)-f^{\prime}(4) \approx-5$

1e. There may be a discontinuity, vertical tangent, or a cusp/corner at $x=2$.
2a. $\quad r^{\prime}(1) \approx-2$
2b. $r^{\prime}(2)=0$

2c. $r^{\prime}(3) \approx 2$
2d. $r^{\prime}(4)$ undefined
2e. $r^{\prime}(5)=0$
2f. $\quad r^{\prime}(6)$ undefined

2g. $\quad r^{\prime}(8)=-\frac{1}{2}$
